

WARTS- WHAT ARE THEY?

A wart is a small lump on the skin, they are normally skin colored and can feel firm and rough. Warts can appear on your knees, palms, knuckles, and fingers.

A verruca is a wart typically found on the bottom of your feet. They can appear in various shapes and sizes, and may have small black dots in the center.

WHAT CAN CAUSE A WART?

Warts are caused by a virus called HPV. If you develop a wart, the virus is able to hide from your body's immune system, which makes the virus very difficult to detect. This means that warts can persist for several years, and can continue to spread across the hands, feet, and other parts of the body.

Your natural immune system's first wave of attack against warts and verrucas.

Swift is the emerging gold standard in verruca and wart treatment. With treatment times in seconds, Swift provides a precise and effective way of treating skin lesions.

Swift offers a non-invasive treatment with no cutting, freezing, or burning—eliminating the need for dressings, downtime, or disruption.

It works by stimulating the body's natural immune response to clear infections naturally.

With short appointments and a quick return to daily life, Swift is a convenient option backed by over 500,000 successful treatments worldwide and clinically proven clearance rates of up to 85%.

Swiftly does it.

**Microwave treatment
for warts, verrucas
and beyond.**

The emerging gold standard treatment for a range of conditions – warts, verrucas, actinic keratosis, fungal nails.

WHAT IS SWIFT?

Swift is an innovative technology, developed in the UK, which has been licenced for the general treatment of skin lesions in Podiatry and Dermatology. Swift uses microwave energy which is delivered through a special probe applied to the skin to treat the affected tissue.

DOES IT HURT?

Like many treatments for skin discomfort may be experienced. It is not uncommon for patients to feel a sharp sensation, similar to an injection. Unlike most treatments for verruca, pain felt during the treatment quickly subsides, and only in rare cases is there any prolonged pain.

SWIFT TREATMENT PROCESS

85% of wart & verruca patients experienced **COMPLETE RESOLUTION**

<1% of wart & verruca patients reported **RECURRENCE**

IS IT SAFE?

With a few exceptions, most people with warts would be able to have this treatment. Your Swift Clinician will carry out an assessment prior to treatment and be able to advise you on this.

HOW MANY TREATMENTS WILL I NEED?

This is dependent on how you respond to treatment. In some cases, you may need more than one treatment (these can be from 14 days to over a month apart depending on the response). Your HealthCare Professional will be able to discuss this with you.

Clinical research suggests that most warts and verruca resolve after 3 Swift appointments. The optimum reported protocol is illustrated below.

FOLLOWING THE APPOINTMENT

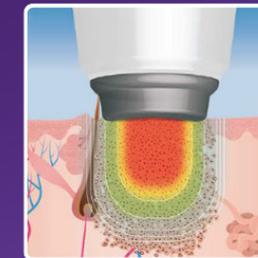

In some cases, the treated area may feel sore but will not prevent you undertaking normal daily activities. There is no need for dressings or aftercare.

HOW MICROWAVE TREATMENTS WORK

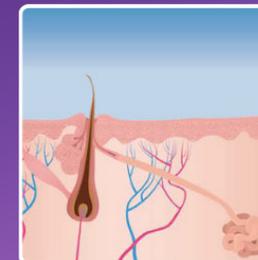

Microwave energy rapidly elevates tissue temperature and creates precise, localized cell response.

Infected tissue can exist several millimeters below the surface and can often be difficult to treat using traditional methods, resulting in either untreated tissue or significant damage.

Swift delivers a precise, highly controlled energy dose. As microwaves travel into the tissue, water molecules begin colliding and creating localized heat energy.

In just seconds the treatment is complete and the healing cascade begins immediately. Treated tissue is quickly replaced, repaired and regenerated.

Using unique microwave heat therapy, Swift activates the immune system to clear infection naturally. Swift eradicates the HPV virus which is the underlying cause of skin lesions. As a result, most patients do not experience symptom recurrence.

There is no cutting, freezing or burning of tissue. Each treatment takes just seconds - and the results are life changing!
